

Iowa DOT Bid Opening: May 17, 2016

Anticipated Start Date: Summer 2016

Anticipated Completion Date: 105 Working Days

This project includes the replacement of the 38th Street Bridge over Perry Creek. The existing 54' x 26' concrete girder bridge will be replaced with a 140' x 32' continuous concrete slab bridge with 5' sidewalks on both sides of the bridge. Multiple public meetings were held with the neighborhood during the design process to determine aesthetic features of the new bridge. These features include new light fixtures and brick veneer to mirror the existing structure, as well as, a black steel pedestrian rail.
