

The sirens around town are not Tornado Sirens and not just for Tornado Warnings. Sioux City utilizes a system of Outdoor Warning Sirens to alert people of potentially dangerous situations. They are Outdoor Warning Sirens used to alert us to chemical spills, severe weather and other outdoor emergencies. When sirens sound, go indoors and turn on a local TV or radio station to find out what the threat is and how to protect yourself. Do not assume there is no emergency because skies are clear. Testing of sirens occurs on the first Monday of the month at 12:00 noon.
